## GRID-SCALE ENERGY STORAGE SOLUTIONS

Í.

The future of renewable energy for utility services

mtu

A Rolls-Royce solution

# MAXIMUM SYSTEM RELIABILITY AND SCALABILITY

As utility networks worldwide continue to add more renewable energy, our grid-scale battery energy storage system (BESS) helps to stabilize the grid. Combined with the *mtu* EnergetIQ Manager, it efficiently stores and dispatches energy by bringing together high-quality hardware, intelligent software and unparalleled service.

We help lower life cycle costs and provide reliable energy solutions for utilities and developers alike - make a smart investment in the future of energy with our innovative solutions.

#### Effortless integration into electrical power systems

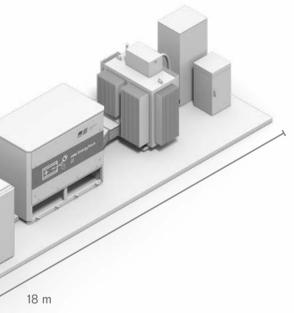

7 m

Store energy from renewable sources during periods of excess and discharge it when you need it the most. The BESS prevents unanticipated shutdowns due to an unreliable energy supply, or grid congestion caused by high demand for power.

## SUSTAINABLE POWER THAT MATTERS

The Power Systems Business Unit of Rolls-Royce is focused on creating sustainable, climate-neutral solutions for drive, propulsion and power generation. We are making a significant contribution to the energy transition with environmentally-friendly technologies from our *mtu* product and solution brand. As leaders in standby power for safety-critical plants and in integrated drive and propulsion systems for ships and heavy-duty land vehicles, our customers know they can depend on us, and have been doing so for over 110 years.

### 03

### Your grid-scale storage solution

Our *mtu* EnergyPack QG enables the effective integration of a high level of renewables, solar or wind, in energy systems.

The scalable design is optimized for front of the meter grid-scale battery energy storage system with typical storage capacity ranging from around 8.9 MWh to 100 MWh and more.

## KEY FEATURES BASED ON INDUSTRY-LEADING TECHNOLOGY

### Highest level of safety and reliability

- Protection level IP54
- Insulation monitoring device
- Aerosol fire protection system

### Long service intervals and life cycle

- Market leading supplier of LFP batteries and inverters
- Liquid cooling system lowers cell temperature deviations, allows longer lifetime and higher enerav densitv
- Low maintenance

#### Simple integration for minimal installation risk and time

- Flexible tailoring of base units, scalable
- to project-specific power and capacity needs
- Modular design and high energy density footprint
- Easy assemble after transportation

#### Excellent performance for the most demanding grid-scale applications

- Minimal downtime, fast charge and discharge rates

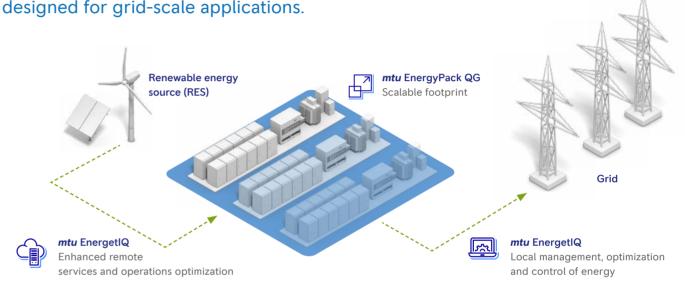

- Ultrafast (ms) response and load acceptance, ideal for frequency regulation services
- Standardized and modular for economic design - System voltage of up to 1,500 V increases
- operating efficiency

### Intelligent control platform mtu EnergetIQ for optimal performance and flexibility

- Automated control of power generation, storage and demand for an optimized operation
- Cloud data storage for performance analysis and optimization
- Easy integration of assets
- Monitoring of asset and system performance for a range of energy sources

# **UNLIMITED SCALING MEETS** PROJECT-SPECIFIC NEEDS

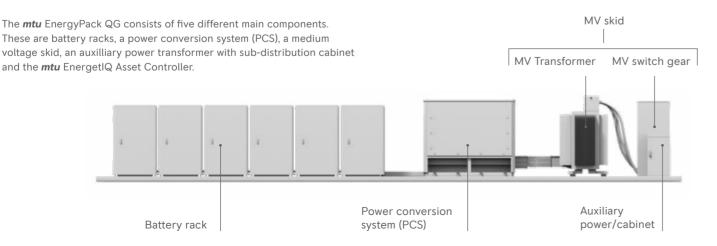

The *mtu* EnergyPack QG is the battery energy storage system designed for grid-scale applications.

A complete plant design may consist of multiple building blocks. integrated control, fire suppression, cooling and heating systems. Each block is designed for 4.39 MVA nominal charge and discharge As standalone operational units and due to their modular design, rating up to 17.89 MWh, consisting of up to 48 battery racks. the racks can easily be replaced in case of failure, ensuring reliable One battery rack has an energy content of 372.7 kWh and contains operation with the highest availability of your batteries.

## *mtu* ENERYPACK QG

### The *mtu* EnergyPack QG is key to effectively integrating a high level of solar and wind renewables in power systems.

### Three basic system configurations are available: QG0.25 (4h storage) / QG0.5 (2h storage) / QG1 (1h storage)

Name of System	QG0.25	QG0.5	QG1
C-rate of the system	0.25	0.5	1
C-rate of the used battery	0.5C or 1C		
Maximum number of battery racks with 372.7 kWh each	24 / 48	24	12
Total capacity of batteries in MWh	8.94 / 17.89	8.94	4.47
Number of asset controllers (1 per 12 battery racks)	2 / 4	2	1
AC output power MVA @40°C	2.19 / 4.39	4.39	4.39
Operating grid voltage VAC	6.6 kV / 11 kV / 13.2 kV / 15 kV / 20 kV / 22 kV / 23 kV / 25 kV / 30 kV / 33 kV / 34.5 kV		
DC voltage range VDC	976 - 1500		

## TECHNICAL DATA

### The *mtu* EnergyPack QG based on one fully assembled base unit.

Sections	Value	<b>mtu</b> EnergyPack QG0.5	Unit
System	Cell chemistry	LFP	
	Nominal capacity at 0.5 C	8.94	MWh
Ambient conditions	Minimum ambient temperature	-20 (-30)	°C
	Maximum ambient temperature	+40 (+55)	°C
	Humidity	< 95 condensing	%
	Maximum operation altitude	≤ 1,000 (≤ 2,000)	m
Electrical	Nominal apparent power	4.39	MVA
	AC short circuit capability	TBD	kA
	Grid frequency	50 / 60	Hz
	Power factor range	TBD	
	Black start capability	Optional	
Housing	Corrosion protection	C4	
	Protection class	IP54	
	Footprint of one fully assembled base unit	7.1 x 19	m
MV-skid option	Voltage	6.6 to 34.5	kV
Interface	Supported communication protocol	Modbus-TCP (Modbus-RTU, IEC 60870-5-104, IEC 61850, DNP3)	

Note: values in parentheses () are optional and might have an impact on derating.

#### Standards

- IEC 62619, IEC 62477-1, IEC 61000-6-2

- Power conversion system: IEC 61000-6-3 or IEC 61000-6-4, IEC 62485-5, CE

# ALL KINDS OF SOLUTIONS FOR ALL KINDS OF PROJECTS

### The *mtu* EnergyPack QG can be scaled in line with demand to cost-effectively maximize asset value.

#### Utilities and grid service providers

Our *mtu* EnergyPacks take care of frequency regulation, manage grid congestion and help to avoid significant investment in grid infrastructure. Solar and wind power become more reliable and instantly switchable, while gas or diesel power plants operate more efficiently when combined with the *mtu* EnergyPack.

#### Industry

Industrial operations that currently run on diesel power and are not connected to the grid can reduce their fuel consumption and meet legal and company environmental standards by integrating renewable sources with an *mtu* EnergyPack. Grid-connected operations can utilize an *mtu* EnergyPack to reduce the power draw charges, increase own-use consumption of existing onsite generation and mitigate rising energy costs.

#### Community

For local power generation, our *mtu* EnergyPacks increase the self-sufficiency of urban areas and provide reliable backup power. Areas not connected to the public grid can ensure high-quality power while integrating renewable energies to reduce their carbon fooprint and reduce costs.

### WIDE RANGE OF TARGET APPLICATIONS

The *mtu* EnergyPack's industrial design is built for the most demanding applications. The system is highly configurable to meet your operational requirements and can be scaled in line with demand to cost-effectively maximize asset value.

#### Energy shifting

The mtu EnergyPack stores excess energy from PV systems or any other generation source in the grid for use at a later time (e.g. peak shaving, load shifting)

#### Energy trading

In combination with the *mtu* EnergetIQ Manager, the system facilitates participation in the higher level electricity markets in front of the electric metering point. In deregulated electricity markets, revenues can be generated by trading in wholesale markets e.g. day-ahead or intraday markets.

#### Frequency regulation and power balancing

Our solution monitors the grid and ensures an instantaneous active and reactive balance between load and generation to help stabilize the frequency of the network (ancillary services).

#### Reactive power and voltage regulation

The power electronics part of the *mtu* EnergyPack contributes to the voltage regulation of the grid and provides reactive power support to the network.

#### Performance optimization

The combination of the above functionalities enables the integration of large amount of renewable energy, lowers the cost of conventional energy generation systems, and provides high quality and reliable power in on-grid applications.

#### Transmission and distribution support

Grid-scale energy storage solutions supply enough capacity to defer or eliminate the need to upgrade grid infrastructure. This enables grid congestion management.

## **REFERENCE PROJECT: SEMPERPOWER**

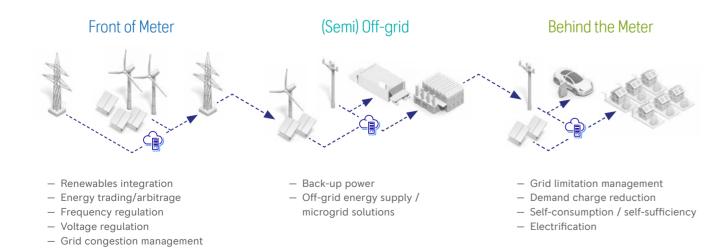

One of our *mtu* EnergyPack QG systems is the largest battery storage facility in the Netherlands at the time of commissioning and one of the largest in the EU, providing a comprehensive EPC turn-key solution.

Description:	Battery storage for frequency control and arbitrage	Scope:	<i>mtu</i> trans EPC: and and
Location:	Vlissingen, NL		
Customer:	SemperPower		and
		Installed capacity:	30.7
		Timeline:	Dec

### Takeaways:

- Our project scope includes the supply and installation of a large-scale battery storage system on a turnkey basis to the Dutch energy company SemperPower in Vlissingen.
- The order includes general contractor services, as well as the construction of the building and other infrastructure.
- Main applications: grid frequency regulation in the Netherlands to integrate electricity from renewable energy sources into the public grid.
- When fully charged, the system has the capacity to supply 8,000 households with electrical energy for an entire day.
- Solution consists of 168 battery units, 7 inverters and the intelligent control platform *mtu* EnergetIQ.

### We address your needs with a comprehensive BESS portfolio

EnergyPack QG including: 168 battery racks, DC/AC inverters, sformers 690 V / 11 KV, mtu EnergetIQ Manager C: construction, grid connection building, site facilities, road, fencing, civil works including: logistics, project management, guality control HSE supervision. Mechanical and electrical installation. commissioning testing.

.7 MW / 62.6 MWh, 0.5 C, 690 V / 11 KV

cember 2022 - February 2023 / Commissioning August 2023

"We see it as our task to accelerate the energy transition. We do this by using energy storage systems that store sustainable energy in times of surplus and release it when the market needs it. We are delighted to have found Rolls-Royce as a partner who, with its high-quality solutions, is pulling in the same direction as us."

Dennis Schiricke, CEO SemperPower B.V.

- 2 Lifetime-Based Overhaul (LTBO)
- 3 Factory reman solutions
- 4 Complete life-cycle support

# **mtu** ENERGETIQ: THE BRAIN OF YOUR POWER PLANT

The *mtu* EnergetIQ Manager optimizes your power plant's performance, by seamlessly integrating its diverse assets and automating the control of power generation, storage, and demand. With the *mtu* EnergetIQ Asset Controller you can easily control and monitor the functional-level of your *mtu* EnergyPack.

Offering	Characteris
System-wide services	<ul> <li>One common user</li> <li>Easy SCADA syste</li> <li>User management to plant manager</li> <li>IT security concept</li> </ul>

- ser interface for all different assets
- stem integration and customization options
- ent with audit trail to control and record access er and assets
- epts according to project specific analysis
- of connected assets, switchgear and grid ith access by web-based query technology nalysis including correlation to external data on and reporting with dashboards
- Jasper reports
- ol, monitoring and protection alytics
- pplications covered, such as, the reserve market, energy storage g reserve, load shedding, sector coupling etc.
- predefined and configurable layouts for trending and reporting

All data on one screen, including assets such as gensets, BESS, photovoltaics and more.

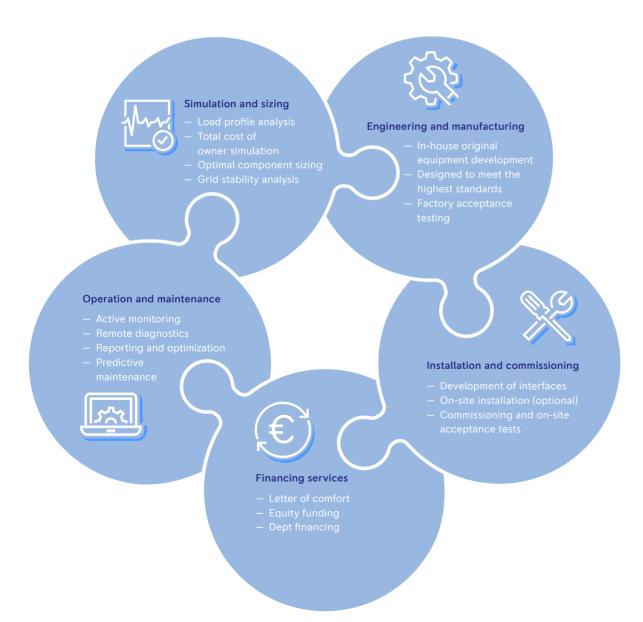

- Comprehensive presentation of information
- System-wide states / alarms / relevant power data
- Individual, region-specific settings are available (colors and symbols)

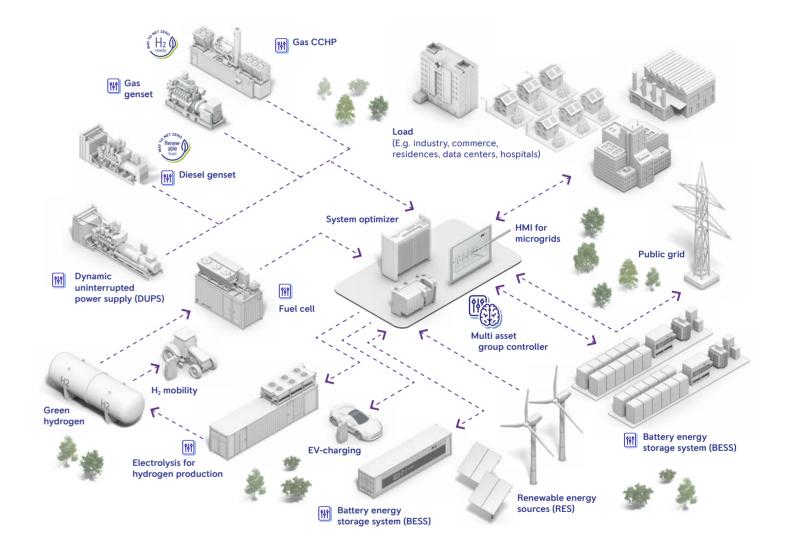

## WE OFFER COMPLETE INTEGRATED SOLUTIONS

### With our broad portfolio of sustainable energy solutions we meet your needs today and tomorrow.

The Power Systems Business Unit of Rolls-Royce provides a variety of services and complete life-cycle support under the product and solution brand *mtu*. Each can be individually designed to serve your

specific needs. BESS services include consulting, planning, financing, single-source supply of hardware and software, as well as installation and maintenance.

### Do you need support?

Our team of experts will help you design a system that meets your project goals and maximizes your site's potential.

www.mtu-solutions.com/powergen

We are here to support you at every stage from design to installation and throughout the system's operational life.

- Overall system evaluation and design support from project development through project closing
- Detailed hardware and software engineering including integration of existing power generation units
- Delivery and commissioning of the energy storage solution
- Training of local operator and maintenance staff
- Remote technical support and monitoring during operation
