

# Diesel Generator Set

# **mtu** 18V2000 DS1400

380V - 415V/50 Hz/data center continuous power/ fuel consumption optimized/NOx emission optimized/18V2000G26F

Optional equipment and finishing shown. Standard may vary.

# Product highlights

#### **Benefits**

- Low fuel consumption
- Optimized system integration ability
- High reliability and availability of power
- Long maintenance intervals
- Optimized ratio between size and power
- Wide operating range without derating

### Support

- Global product support offered

#### **Standards**

- Engine-generator set is designed and manufactured in facilities certified to standards ISO 2008:9001 and ISO 2004:14001
- Generator set complies to G3 according to ISO 8528
- Generator meets NEMA MG1, BS5000, ISO, DIN EN and IEC standards
- NFPA 110

#### Power rating

- System rating: 1250 kVA
- Accepts rated load in one step per NFPA 110
- $-\,$  Generator set complies to G3 according to ISO 8528-5
- Generator set exceeds load steps according to ISO 8528-5

#### Performance assurance certification (PAC)

- Engine-generator set tested to ISO 8528-5 for transient response
- 100% load factor for continuous power applications
- Verified product design, quality and performance integrity
- All engine systems are prototype and factory tested

# Complete range of accessories available

- Control panel
- Power panel
- Fuel system
- Fuel connections with shut-off valve mounted to base frame
- Starting/charging system
- Exhaust system
- Mechanical radiator
- Water Charge-Air-Cooler
- Oversized voltage alternators

#### **Cooling System**

- Air-to-Air Charge-Air Cooling (TD)
- Water-to-Air Charge-Air Cooling (TB)

#### Emissions

- Fuel consumption optimized
- NOx emission optimized, Tier 2 and NEA (ORDE) optimization optionally available

#### Certifications

- CE certification option
- Unit certificate acc. to VDE-AR-N 4110

All data refers only to the engine and is based on ISO standard conditions (25°C and 100m above sea level).

<sup>2</sup> Emission optimized data refer to NOx emission optimized and NEA (ORDE) optimized/Tier 2 compliant engines.

<sup>3</sup> Values referenced are in accordance with ISO 3046-1. Conversion calculated with fuel density of 0.83 g/ml. All fuel consumption values refer to rated engine power.

<sup>\*</sup> cos phi = 0.8

Electrical outputs may vary depending on generator voltage and ambient conditions. For power outputs consult your *mtu* dealer.

Intake air depression/mbar: 15mbar

Exhaust back pressure/mbar: 30mbar

## **Engine**

- 4-cycle
- Standard single stage air filter
- Oil drain extension & shut-off valve
- Full flow oil filters
- Closed crankcase ventilation
- Governor-electronic isochronous ADEC/ECU9
- Common rail fuel injection
- Dry exhaust manifold
- Electric starting motor (24V)
- Fuel consumption optimized engine
- $\hfill\square$  NOx emission optimized engine
- ☐ Tier 2 optimized engine
- □ NEA (ORDE) optimized engine

## Generator

- Leroy Somer low voltage generator
- Meets NEMA MG1, BS5000, IEC 60034-1,
   VDE 0530, DIN EN 12601, AS1359
   and ISO 8528-3 requirements
- Superior voltage waveform
- Solid state, volts-per-Hertz regulator
- 4 pole three-phase synchronous generator
- Brushless, self-excited, self-regulating, self-ventilated
- Digital voltage regulator
- Anti condensation heater
- Stator winding Y-connected, accessible neutral (brought out)

- Protection IP 23
- less than 5% harmonic distorsion
- 2/3 pitch stator windings
- No load to full load regulation
- ± 0.25% voltage regulation no load to full load
- Insulation class H, utilization acc. to H
- Radio suppression EN55011, group 1, cl. B
- Short circuit capability 3xln for 10sec
- Sustained short circuit current of up to 300% of the rated current for up to 10 seconds (Leroy Somer generator)
- Winding and bearing RTDs (without monitoring)

- Excitation by AREP + PMI
- Mounting of CT's: 3x 2 core CT's
- Voltage setpoint adjustment ±10V
- Sustained short circuit current of up to 250% of the rated current for up to 10 seconds (Marathon generator)
- ☐ Marathon low voltage generator
- ☐ Oversized generator

<sup>\*\*</sup> BE, fuel optimized: max. power available up to: open power unit 40°C/400m; NOx emission optimized, EPA Tier 2 compl., NEA: standard operating conditions/open power unit 25°C/100m

# Weights and dimensions

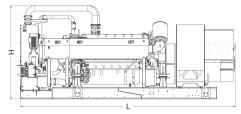

# Air-to-Air Charge-Air Cooling (TD)

## Water-to-Air Charge-Air Cooling (TB)

Drawing above for illustration purposes only, based on a standard open power 400 Volt engine-generator set. Lengths may vary with other voltages. Do not use for installation design. See website for unit specific template drawings.

| System                                     | Dimensions (LxWxH)    | Weight (incl. engine-oil and coolant) |
|--|-----------------------|---------------------------------------|
| Open power unit (OPU)<br>Air-to-Air (TD)   | 4720 x 1990 x 2200 mm | 7850 kg                               |
| Open power unit (OPU)<br>Water-to-Air (TB) | 4711 x 1988 x 2046 mm | 7500 kg                               |

Weights and dimensions are based on open power units and are estimates only. Consult the factory for accurate weights and dimensions for your specific engine-generator set.

# Sound data

Consult your local mtu distributor for sound data.

# **Emissions data**

- Consult your local *mtu* distributor for emissions data.

# Rating definitions and conditions

- Data center continuous power ratings (DCP) apply to data center installations where a reliable utility power is available and comply with Uptime Institute Tier III and IV requirements. At constant or varying load, the number of generator set operating hours is unlimited. A 10% overload capacity is available for one hour in twelve. Ratings are in accordance with ISO 8528-1, ISO 3046-1, BS 5514 and AS 2789. Average load factor: ≤ 100%.
- $-\,$  Consult your local  $\it{mtu}$  distributor for derating information.
